

RespiGard™ membranes provide an eco-friendly option for designers and brands for products in the performance outerwear space.

Using a proprietary manufacturing process, RespiGard™ membranes exhibit high levels of performance in both breathability and water repellency. These performance properties paired with the quiet sound and soft feel the membrane make RespiGard™ an ideal selection for use in the performance outdoor textile space.

All RespiGard™ products are Oeko-Tex 100 certified and produced without the use of solvents or fluorinated materials to provide a low carbon footprint. In combination with other polypropylene components RespiGard™ allows for creation of a recyclable mono-material solution to the garments end-of-life.

For more information, please visit www.Celgard.com/RespiGard or contact your local sales representative.
