Schoeller Performance Fabrics Winter 2022-23 Collection Highlights

Fairly produced, multifunctional and uncompromisingly sustainable

January 2021: Sustainability is a life philosophy. A central focus of a sustainable lifestyle is fairly-produced, multifunctional textiles with eco-friendly technologies and long-lasting products with recycled, recyclable or organic-based components. Schoeller is encompassing these responsible innovations in its new biocosmo line, which represents lived-out sustainability, demonstrating immense respect for Mother Nature and future generations.

BIOCOSMO

Within the Schoeller Performance Collection, **biocosmo** is setting a clear focus: extraordinary sustainability. The innovative **schoeller**[®]-**allweather** three-layer stretch fabric, for example, combines sustainability with functionality. Fairly produced in Switzerland, the hard-wearing outdoor and winter sports quality features **c_change**[®] weather protection and ecological elements: a

high-quality recycled polyamide and a recycled elastane, as well as the water-repelling **ecorepel**[®] **Bio** technology finish, based on renewable raw materials.

RECYCLED CONTENT

A feeling of freedom and home is radiated by the wonderfully-comfortable, bi-elastic **schoeller**[®]-**shape-**jacket and pants fabric with organic cotton on the interior and recycled polyamide on the matt exterior. Freedom of movement and sustainability also characterize the soft green, bi-elastic **schoeller**[®]-**dryskin** with recycled polyamide and PFC-free **ecorepel**[®] **Bio** technology.

Outstanding moisture transport and reliable abrasion resistance make it the ideal accompaniment for every type of active sport.

MOVEABLE COMFORT

The **schoeller**[®]-**allweather** tweed qualities in vibrant woollen colors can be tailored into sporty-elegant travelling companions. The two-layer Merino blend floats softly and, thanks to the **c_change**[®] climate membrane (now also available in black), ensures reliable weather protection. The super-comfortable, doubleface **schoeller**[®]-**comfortshell** flatteringly sheathes the

silhouette. As jackets or pants, the washable mulesing-free Merino **soft-shell** offers all-round comfort along with ecological water-repelling properties, thanks to **ecorepel**[®] **Bio** technology.

SMART PROTECTION

Highly-elastic and very voluminous best describe the comfortable **schoeller**[®]-**comfortshell** jacket quality with its interesting 3D effect. Whether as a fashionable outdoor jacket or as a sporty fashion outfit, thanks to the soft fleece backing, the special **soft-shell** keeps the wearer cozy and warm. Discrete safety on the roads is provided by the light, casual **schoeller**[®]-**spirit** cotton-polyester

blend with shiny reflective dot coating. Here too, the additional eco-friendly water repellence is ensured by the **ecorepel**[®] **Bio** technology.

FANCY FASHION

Sophisticated functionality is embodied in the light, two-layer **schoeller**[®]-**allweather** jacket fabrics in a naturally-shimmering taffeta look. With the bionic **c_change**[®] climate membrane and the PFC-free **ecorepel**[®] **Bio** technology, the fine down quality not only impresses optically on the slopes but also provides protection from wind and weather. A real eye-catcher is the **schoeller**[®]-

spirit fabric in sparkling gold or orange, or vibrant hot pink. The full-surface glossy coating responds to the play of light, making an extravagant statement.
