

THE NEW MAGMA MID GTX BY TECNICA MATCHES PERFECT INDIVIDUAL FIT WITH FULL WEATHER PROTECTION

THE NEW MAGMA MID GTX IS DESIGNED TO HIKE, RUN AND SCRAMBLE IN ALL TYPES OF TECHNICAL MOUNTAIN TERRAIN. IT DELIVERS A NEW LEVEL OF GRIP AND PROTECTION IN A LIGHTWEIGHT, COMFORTABLE BOOT.

New for FW21, the Magma Mid GTX – a remarkably lightweight, easy-to-wear hiker that is versatile in design, able to comfortably explore long singletrack trails and provide steady grip in technical rocky terrain or on slippery sidewalks.

Available in both a men's and women's version, this boot is a line extension from the successful low-cut Magma GTX. The anatomically shaped last closely matches the shape of the foot, delivering a precise fit out of the box that can be even more dialled in with the integrated lacing system and Tecnica's C.A.S system, which custom molds sections of the upper to the individual's foot.

The mid-cut boot features a suede upper with a Gore-Tex® Extended Comfort liner for that ideal combination of warmth, protection, and waterproof breathability, and the thoughtful outsole design, inspired by MTB enduro tires, provides optimal grip on all surfaces regardless of conditions. The Magma Mid GTX is a true one-quiver boot for getting around in all seasons.

Protection + Durability – The new outsole combines Vibram Litebase and Megagrip compound rubber. It wraps the upper at critical abrasion zones, providing grip, traction and durability not just underfoot, but at the toe and along the sides too without the weight of a traditional outsole and no need for a conventional glued rubber rand.

Fast Transition – The last, midsole toe rocker and unique rounded toe shape have been carefully designed to enhance the MAGMA's responsiveness, grip and fast acceleration and transition in technical terrain.

Downhill Performance – The ultra-large heel shape provides stability when hiking or running downhill and on technical traverses. Two rubber stability fins on each side of the back of the shoe provide an unparalleled level of braking on technical descents, including on scree, gravel or loose rock.

Fit – The upper and footbed are pre-shaped around an anatomical last to deliver a precise fit and feel out of the box. It also provides greater midfoot support and heel hold. For those who need it, the C.A.S (Custom Adaptive Shape) system can be applied, further molding the shape of the shoe to an individual's foot.

Magma Mid GTX - Technical specs

Upper: Suede leather with liquid rubber reinforcements

Lining: Breathable mesh liner/ Gore-Tex® Extended Comfort

Midsole: Compression-molded EVA with high rebound compound

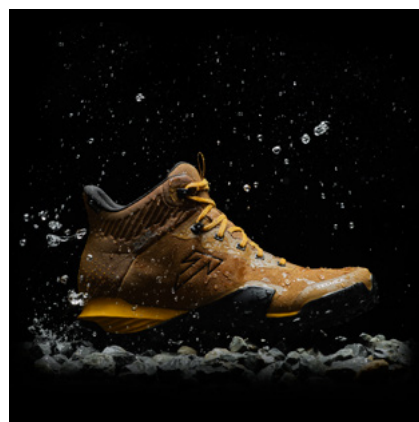

Footbed: Anatomical, Pre-Molded, EVA

Outsole: Vibram® Megagrip™ Litebase™ XO SHIELD

Weight: Men's 410 g (9 US) // Wm's 345 g (7 US)

Sizes: Men's 7 - 14.5 // Wm's 5.5 - 10.5

Release date: September 2021
